Release Notes

September 7th 2024 Release Notes

Build 2.9.1

Contents

Summary

The 2.7.1 Release includes the new ability to navigate to a specific dataset with a unique URL. This release also includes a number of fixes for issues in the Stage.

If you have any questions about this release, please contact us at support@novacene.ai.

Fix – Stage – Doughnut chart label overlap - 2125

If variables with long names were displayed with a doughnut chart, the labels could intersect with each other. This has been fixed

Fix – Stage – "Ask Question" function bug with filters – 2348

When asking a question in the "Ask Questions" inspector bar in the Stage, the filter to display which pieces information was used by the LLM to generate an answer was not working. This has now been fixed. To toggle these filters on and off, use the filter button net to the LLM responses.

Fix – Stage – Text not copying from List widget 2430

Some users reported issues with the copy button not working in the List widget of the stage. This has been fixed. Now, the copy function is not available in the list widget when the Stage is in Edit mode.

Fix – Stage – Responses from GPT cut short – 2419

Some users experienced truncated answers from GPT. This has been fixed.

Fix – Data screen – Wrong files seen in folder – 2419

When refreshing in the data screen, sometimes files in the root directory would display as if they were in another folder. This has been fixed.
